

As an Amateur Radio Operator who uses frequencies between 2 and 30 Mhz for both pleasure and in support of emergency and US Air Force MARS communications, I am extremely concerned about the potential for interference to the Amateur Radio Service by PLC systems. As it stands, the Amateur Radio Service is already under a constant bombardment of interference from millions of Part 15 devices, poorly shielded televisions and computer monitors, as well as poorly maintained power transmission and cable television lines. I hope that the Commission will thoroughly investigate what seems to be a high potential for interference not only to the Amateur Radio Service, but to maritime, aviation, commercial, broadcast, military, and government communications systems operating between 2 and 30 Mhz.

Sincerely,

Brad Johnson
